

Formic Logo Book

Construction, clear space, lockups, colorways and correct use of the Formic mark and logotype.

The idea	01	Construction	02
Clear space & minimum size	03	Lockups	04
Colorways	05	Backgrounds	06
Motion	07	Favicon & app icon	08
Misuse	09	Asset checklist	10

Three nodes, one signal

Formic takes its name from *Formicidae*, the ant family — a colony where no single member holds the plan, yet the work gets coordinated anyway. That is the product: many agents, many worktrees, one operator watching the whole hill.

The mark abstracts that into its smallest legible form. Three nodes, three edges, and a signal moving between them. It is deliberately not an ant. Literal insect imagery reads as playful at exactly the moment an operator needs the interface to read as trustworthy, so the metaphor lives in the name and in the structure, never in illustration.

The triangle leans forward 18°. An upright triangle is a warning sign or a play button; the tilt is what turns a static symbol into something in motion, and it is the single most identity-carrying decision in the mark. Preserve it exactly.

Geometry

The mark is built on a 32-unit square grid. All values below are in grid units (u); at a 32 px render, 1u = 1 px. Never redraw the mark by eye — scale the vector.

PROPERTY	VALUE
Grid	32 × 32 u
Apex	16, 4.5
Base left	6.5, 25.5
Base right	25.5, 25.5
Base width	19 u
Height	21 u
Apex angle	48.6°
Base angles	65.7°
Tilt	18° about 16,16
Node radius	3.2 u
Edge weight	2.1 u
Pulse weight	2.4 u
Joins / caps	round

The triangle is isosceles and taller than it is wide (21:19). Nodes sit *on* the vertices rather than replacing them, so the silhouette still resolves as a triangle when the nodes blur together at small sizes.

Give it room

Clear space is defined as **x**, where x equals the node diameter (6.4u, or 20% of the mark's height). No type, rule, image edge or UI chrome may enter that zone on any side. When in doubt, give it more.

CONTEXT	MINIMUM
Mark alone — digital	16 px
Mark alone — print	6 mm
Full lockup — digital	92 px wide
Full lockup — print	26 mm wide

48

24

16 · thickened

Below 24 px, step edge weight up to 3u and node radius to 4.2u, and drop the pulse. Below 16 px, do not use the mark — use a solid clay square with the wordmark's F.

Four approved arrangements

The horizontal lockup is primary and should be the default everywhere the brand appears with room to breathe. The logotype is **Syne ExtraBold (800)**, tracked -2.5% , with the *i* set in clay. That single letter is the entire color break — never color additional letters.

horizontal – primary

stacked – square formats

mark only – favicon, avatar

wordmark only – dense chrome

Gap between mark and wordmark is $0.35 \times$ mark height. Optical baseline: the wordmark's cap height aligns to the mark's full height, not its bounding box.

Five, and only five

Indigo — edges

--indigo-500

#16181b

Graphite — logotype

--gray-900

1 · primary on white

2 · dark — lifted tints

3 · single-colour clay

4 · mono black

5 · mono white (knockout)

**Mono
colorways**
drop the
clay

— a single-colour
lockup must stay
single-colour.
Use them for
embroidery, laser
etch, single-plate
print, partner co-
branding, and
any surface
where the two-
colour version
cannot reproduce
faithfully.

Where it can sit

✓ white

✓ gray-50

✓ graphite

✓ clay + knockout

On photography, place the knockout lockup over an area of even tone with at least 4.5:1 contrast, or set a solid plate behind it. Never place the two-colour lockup directly on an image — the clay nodes lose against warm content.

The signal

A dash travels the perimeter on a 3.2 s linear loop; each node flares to 124% as the signal reaches it, then settles. The effect should read as ambient colony activity, not as a loading spinner — if a viewer waits for it to finish, it is running too fast.

PROPERTY	VALUE
Loop	3.2 s linear, infinite
Dash	15 / 85 (pathLength 100)
Node flare	scale 1 → 1.24 → 1
Node offsets	0 s / 1.06 s / 2.13 s
Direction	apex → right → left

Animate in the header, splash, loading screens and marketing hero only. Every static context — favicon, OG image, print, email, partner decks — uses the still frame. Always ship the `prefers-reduced-motion` fallback.

Small sizes

512 · source

32 · standard

16 · thickened

app icon · dark plate

App icon uses a graphite plate with a 22% corner radius, mark centred optically (nudged 2% up from geometric centre to compensate for the tilt's visual weight sitting low-right).

Nine ways to get it wrong

What to ship

ASSET	FORMAT	NOTES
Mark, animated	SVG	Header, splash. Includes reduced-motion fallback.
Mark, static	SVG	Source for every raster export.
Mark, 16px optimised	SVG / ICO	Thickened edges, larger nodes, no pulse.
Favicon set	ICO, PNG	16, 32, 48, 180 (Apple touch), 512 (maskable).
Horizontal lockup	SVG	Light, dark, mono black, mono white.
Stacked lockup	SVG	Same four colourways.
OG / social card	PNG	1200 × 630, static mark, graphite plate.
App icon	PNG	1024 source, 22% radius plate.
